

DESCRIPTION: TRINITY GOLD® 452WP is a protectant and systemic fungicide/bactericide which prevents fungal and bacterial infection on plants including botrytis on carnations, botrytis and downy mildew on roses, angular leaf spot, rust on French beans, early and late blight on tomatoes, and downy mildew and purple blotch on onions.

MODE OF ACTION: Copper Oxchloride acts by interfering with the enzyme system of spores and mycelium, a process, which is usually irreversible. It forms a chemical barrier against fungal attacks. Cymoxanil's mode of action is as a local systemic. It penetrates rapidly and when inside the plant, it cannot be washed off by rain. It controls diseases during the incubation period and prevents the appearance of damage on the crop.

APPLICATION METHOD:

Crop	Disease	Rate
Carnations	Botrytis	2.5-3.0 kg/Ha in 1000 litres
Roses	Botrytis, Downy mildew	of water
French beans	Angular leaf spot, Rust	(50-60 g in 20 litres of water)
Tomatoes	Early and Late blight	(water)
Onions	Downy mildew, Purple blotch	

PRE-HARVEST INTERVAL: Tomatoes-3 days, French beans and onions-14 days

APPLICATION TIMING: Apply at the first signs of the disease and repeat at 10 day intervals. 3 applications are sufficient for effective control.

APPLICATION METHOD: Apply by foliar spraying using 1000 litres of water per hectare. Ensure adequate coverage of plant foliage.
